SHEIKH NAZMUL

AI/ML Engineer

Mohammedpur, Dhaka | 01838457404 | sheikhnazmulislamnir@gmail.com | LinkedIn | GitHub

OBJECTIVE

AI/ML Engineer with 1 year of product development and research experience, skilled in Python, deep learning (PyTorch), and LLM-based applications. Passionate about building and deploying scalable, production-ready AI solutions. Eager to join a collaborative R&D team and deliver real business impact. .

TECHNICAL SKILLS

Programming: Python, SQL, JavaScript, TypeScript
AI / Machine Learning: Machine Learning, Generative AI, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Natural Language Processing, Prompt Engineering, AI Agents
AI Frameworks & Libraries: LangChain, FAISS, Pandas, NumPy, Sentence Transformers, Pydantic **LLM & AI Integration:** Google Gemini, Groq API, LLM API Integration, Semantic Search, Vector Retrieval, Structured Outputs
Backend & APIs: FastAPI, REST APIs, Webhooks, JSON, SQLAlchemy Codex, Claude, Antigravity
Automation & Integrations: n8n, Meta WhatsApp Cloud API, Google Sheets API
Developer Tools & Deployment: Git, GitHub, Docker, Docker Compose, Streamlit, Postman

Soft Skills: Problem Solving, Analytical Thinking, Critical Analysis, Teamwork & Collaboration, Adaptability, Communication

PROJECT EXPERIENCE

Plant Disease Detection

LIVE |HuggingFace

Python | Tansaflow | EfficientNet-B0 | Computer Vision

- Developed a diabetes prediction application using a trained XGBoost classification model.
- Applied feature scaling using a saved preprocessing artifact before model inference.
- Built an interactive interface to collect eight input features and display model predictions.

Diabetes Prediction System

LIVE | GitHub

Python | XGBoost | Scikit-learn | Gradio | Huggingface

- Developed a diabetes prediction application using a trained XGBoost classification model.
- Applied feature scaling using a saved preprocessing artifact before model inference.
- Built an interactive interface to collect eight input features and display model predictions.

ML Prediction FastAPI

GitHub

Python | Machine Learning | FastAPI | REST APIs | Gradio | Huggingface

- Developed an ML prediction application that exposes model inference through a FastAPI REST API.
- Worked on structured input handling and prediction responses for API-based model serving.
- Organized the application to support integration between machine learning logic and backend services.

EDUCATION

B.Sc. in Computer Science and Engineering May 2026
Daffodil International University (DIU)
